Miners Like Effective Drum Heating

Australian mining has been booming in the past few years with the trend continuing into the future. Most of the mines are in remote locations and so efficiency and reliability are key aspects of any purchasing decision.

When it comes to heating grease, or maintaining the temperature of chemicals used in the mining process, remoteness also often means cold overnight temperatures. That is why more and more miners are turning to LMK Thermosafe drum heaters.

What attracts them is the whole package — adjustable thermostatic control means the drum heater can be safely left on overnight; insulation means accidental burning risk is reduced; high efficiency means lower energy cost; robustness and simplicity means that they last longer.

To find out more about the HHD 1000w and the HP2D 1300w drum heater jackets, please call!
