CASE STUDY – RICH RIVER EXPORTS – GRAEBAR PARK STABLES MORNINGON VIC

Using short-wave infrared technology to dry horses in their stables is a cutting-edge and efficient method for equine care.

Short-wave infrared heaters emit intense, focused heat that penetrates deep into the horse's coat and skin, effectively accelerating the drying process after a bath or exercise.

This technology not only expedites the drying time but also promotes blood circulation, muscle relaxation, and alleviates muscle stiffness, which is particularly beneficial for the equine athletes.

Additionally, short-wave infrared ensures a gentle and soothing heat, reducing the risk of skin irritation or discomfort for the horse.

It's a remarkable tool that not only enhances the well-being of the horses but also aids in maintaining their overall health and peak performance, making it a valuable addition to modern equine management practices.

"The heaters are fantastic, perfect for what I needed "
Jerome Hunter – Trainer

RICH RIVER EXPORTS – GRAEBAR PARK STABLES FITTED WITH HELIOS TITAN EHT1-20 SHORT-WAVE INFRARED HEATERS
